

OUR ENGINEERING AND MANUFACTURING CAPABILITIES

- Modern Research Center: the most powerful scientific computation and numerical simulation center in Europe,
- System analysis (Abaqus, ARC3D, Sysnoise, Paulstrasoft),
- Dedicated technical assistance,
- Integrated electronic, acoustics, mechanical and material engineering skills,
- Dynamic testing facilities (multi-axes test rigs, electrodynamic and hydraulic shakers),
- Mixing of specialty elastomers,
- Wire mesh and cable mounts assembly lines,
- Actuators, sensors and controllers for active systems,
- Wide range of capacities,
- In-house manufacturing of cable mounts,
- Field assistance (testing, installation, survey),
- Expertise in acoustics.

Hydraulic shakers – 4 axes

PAULSTRA VIBRACHOC, STOP-CHOC and BARRY CONTROLS, as part of the HUTCHINSON group and in combination with our world class technical capabilities, is able to optimize the solution to your vibration isolation problem.

PAULSTRA VIBRACHOC, STOP-CHOC and BARRY CONTROLS, a world leader in vibration isolation technology, can offer you a wide range of standard products immediately available worldwide.

SHOCK & VIBRATION

QUALITY

PAULSTRA - VIBRACHOC - BARRY CONTROLS
 are ISO 9100 approved.

60 YEARS EXPERIENCE IN THE DEFENSE INDUSTRY

For more than 60 years, our defense and industry division has developed significant experience in the design and manufacture of a full range of products for the defense industry.

We develop or adapt existing products to respond to the strict requirements of military technical specifications. The products manufactured are adapted to the constraints of all-terrain driving at the same time as retaining highly acceptable vibration and acoustic comfort in on-road conditions. The solutions proposed can combine different technologies : high elastomeric temperature, metallic and hydraulic cushions, cable-damper systems - thereby complying with the highest technical requirements of applicable standards.

ENGINEERING

With strong technical knowledge and innovative support from HUTCHINSON Research Center, our customers benefit from an experienced team of engineers and designers who develop customized solutions for demanding applications.

Our capabilities include CAD Design (Autocad and Catia V5), Finite Element Analysis (FEA) and modelling, laboratory material for development of new compounds, static and dynamic testing facilities.

PROJECT MANAGEMENT

Project management begins with the study of a customer's specification through our compliance matrixes and dedicated planning.

We are able to propose innovative technical solutions in terms of suspensions for armoured cabs, power trains, electronic and optronic or on-board communication equipment. Our projects run through the conventional project milestones : preliminary design review (PDR), critical design review (CDR) and first article inspection (FAI).

When requested, we also supply literature packages including risk management plans, structural analyses, weight analyses, FAI report qualification test reports, maintenance documentation, etc.
