

# JUBOFLEX<sup>®</sup>

## WITH SEPARATE HUB

## DESCRIPTION

Flexible element

- ① Precompressed natural rubber.
- ② Bonded metal spacers.
- ③ Precompression band (to be removed after installation).

• Flange

- ④ Die-cast steel specially bored to fit the separate hub.
- ⑤ Universal separate hub (not supplied by PAULSTRA).

## OPERATION

In addition to the characteristics described above, the separate hub used in conjunction with the JUBOFLEX coupling provides the advantage :

- Ready to assemble without machining the flanges.

### Advantages

- Reduced size.
- Simplified axial positioning.
- Easy to assemble and disassemble.
- Reduction of costs by simplifying the machining required for the shafts and flanges.

### Recommendation

- In use, precompression is achieved by the fixing bolts and the JUBOFLEX coupling operates without the precompression band round the flexible element.

Please see current price list for availability of items.

\* For shaft diameters, please refer to the hub manufacturers' specifications.

The maximum torque is considered to be an infrequent start-up torque and is not periodic.

For higher nominal torque see "Juboflex S".

# PARTS LIST

The flexible elements are delivered precompressed using a precompression band which should be removed after installation.

# ASSEMBLY

- Precompression for the initial installation is achieved by a band ③ placed round the outside (our flexible elements are delivered with this band).
- Position the flexible element with its band to attach three non-adjacent holes to the three arms of one flange, and then the three other holes to the other flange.
- Tighten the bolts to the following torques :

Reference	Nominal torque TCN (N.m)	Torque value (N.m)
632027/632205	40	21
632023/632210	90	41
632017/632217	160	72
632029/632226	250	113
632031	350	240
632043	500	350
632025	700	350
632320	1 200	350

- Cut the original band or remove the disassembly band.

**Example : internal combustion engine/generator coupling mounted on a ring attached to the fly wheel.**
